

## Setting up your Pleiadian Communication Portal (PCP)

You have 5 separate components in your package, as labeled above.

First, turn the Communication Portal upside down with the small tetrahedron (3 dimensional triangle) pointing downward. Be gentle with the small wires.

Hold Metatron's Cube, so the **black loop** (spinner) on the end of the cube hangs down and slips over the **gold hook** rising from the center of the tetrahedron. After hooking the cube, turn the PCP over.

Place the bottom tetrahedron of the PCP into the base and rest the I.Connect in the bottom point.

### Leveling your PCP

With the base on a level surface, rotate the PCP within the base to test which direction is the most stable. Make sure the top stays level. You also want Metatron's Cube to center over the bottom (as shown). You may also gently move the center hook at the top holding Metatron's Cube to center the cube over the bottom. The fourth gem is apatite at the tip and center of Metatron's Cube

Place the crystal filled ring on the top.

There are 3 gems inside the ring that should line up with the gems on the points of the PCP.

In clockwise order: blue lapis, red carnelian and green chrysoprase. If the gems seem in reverse order, then flip the ring over. Gently shake the ring to distribute the inner crystal mix.

Both the ring and the I.Connect can be removed and worked with as independent tools, but should be kept in the PCP most times.

To activate the Pleiadian Portal, play Christine Day's Activation 1, while spinning the center Metatron's Cube clockwise. See the link below. Charge your I.Connect and Heart Companion at the base of the Portal over a two hour period.
